

## POLYZEN, INC.

### POLYZEN ENHANCES ASSEMBLY CAPABILITIES

In strategic moves to fill an industry void and expand services to medical industry OEMs, Polyzen, Inc. has increased its capabilities to offer a broader range of product assembly and packaging services. Benefits include highly favorable turnaround times and pricing, said to be faster and less expensive, respectively, than any other similar services on the market at the current time.

Polyzen is a leading developer and manufacturer of specialty disposable components and/or devices for the medical industry. Ongoing and accelerated consolidation within the industry has prompted suppliers such as Polyzen to respond to changing industry needs, among them offering newer and larger assembly capabilities.

Polyzen officials are quick to point out that assembly operations have been hampered by the intensive labor required and the equipment which is not suited for quick turnaround. In addressing these shortfalls, Polyzen President Tilak M. Shah notes, "We established a special task force to meet the challenge of providing quick assembly operations at high competitive prices and slow turnaround head-on. We now have the personnel and the resources in a dedicated operation, utilizing proprietary processes plus specialized equipment and a fully equipped in-house machine shop."

The Medical and Polymer Divisions of Polyzen, Inc. offer a one-stop source for the production of quality products and materials for medical device OEMs. Products and services of Polyzen include thin film welding, DIP molding and coating of both polyurethane and silicone materials, injection molding, thermo/vacuum forming, thin-wall film, sheet and specialty tubing, blow molding of polyurethane, PVC and TPEs insert molding and catheter and device assembly. Specialties of Polyzen also include contract research and development for drug containing balloon devices, specialty polymer formulations and development and radiopaque compounding. The firm is FDA registered and GMP compliant and has Class 10,000 clean room facilities. Polyzen is also ISO 9002 Registered.

Polyzen is a leading manufacturer of specialty and disposable components and devices for medical industry OEMs. Polyzen specializes in taking a project from conception all the way through to final production. The firm offers an array of services including extremely quick turnaround time, high quality products, technical expertise and dependable service. Polyzen manufactures non latex low pressure balloons, stent and scope tubing coatings, organ/tissue bags, protective barrier sleeves, clear probe covers, urethane bladders, thin wall films, and now does various device assembly, among others.
